

Content workflow student workbook

AI School | October 1 2026 | Three hour online session

Use this workbook to draft a newsletter from evidence, adapt it into social and video drafts, make a human review decision, and then evaluate the whole process. Keep the original and revised versions so you can explain what changed.

All Bright Harbor Lab and Harbor Bike Repair details are fictional classroom data. Use made-up details only. This workbook does not require coding, API credits, private records, or publication.

Your deliverables

- A source ledger and drafted newsletter
- LinkedIn and X drafts plus a storyboard or rendered draft video
- A human decision tied to the exact reviewed versions
- Fixed test results, one repair, and before and after evidence

Session route

Minutes	Activity
0-25	Outcome, source pack and claim ledger
25-65	Draft newsletter and posts; plan and render video
65-80	Human editorial review and approval
80-90	Break
90-150	Formal evaluations and improvement
150-170	Separate ElevenLabs voice agent demo
170-180	Package and exit ticket

Choose one risk to watch

What mistake would make you hold a content package?

.....

.....

.....

Source pack and brief

INPUT: Use these facts to create the newsletter. The newsletter is an output, not an independent source of truth.

ID	Approved fictional fact
F01	Bright Harbor Lab and every workshop detail in this pack are fictional classroom data.
F02	The fictional workshop is hosted by Bright Harbor Lab.
F03	The workshop is online on 15 October 2026 at 16:00 UTC and lasts 60 minutes.
F04	Participants need no coding experience.
F05	The exercise turns source notes into a newsletter, social posts, and a short text-led video.
F06	The editorial advice is to choose one useful idea and check names, dates, times, and amounts against the source before reuse.
F07	The teaching outline includes a human review of the content package before publication.
F08	The exact practice call to action is: Read the practice newsletter.
F09	No registration link, price, speaker, sponsor, attendance count, business outcome, or availability figure is supplied.

Set the brief

Audience: busy nontechnical professionals. Tone: clear, useful, no hype. Goal: explain one useful content habit and the fictional workshop.

One main idea I want the reader to remember

.....

.....

A missing detail I must not invent

.....

.....

Claim ledger and newsletter draft

For each claim, point to a fact that actually supports its wording. A valid F-ID alone is not enough.

Claim I want to make	F-ID and evidence	Use or clarify

Newsletter draft

Target 140-220 words. Include a title, a useful opening, supported details, the synthetic label, and the exact CTA. Keep source citations in review metadata.

Title

.....

Draft or paste the body below

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

Adapt the newsletter for social channels

Keep the original source beside your newsletter. Adapt the presentation without adding facts. These are classroom limits, not universal platform maximums.

LinkedIn draft

Target 80-130 words. Retain the synthetic label and exact CTA.

.....

.....

.....

.....

.....

.....

.....

.....

.....

X draft

Maximum 240 Unicode code points, including spaces and punctuation. Retain the synthetic label and exact CTA.

.....

.....

.....

.....

Length checks: LinkedIn words _____ X characters _____

Which wording did I improve, and which source check protects its meaning?

.....

.....

Storyboard and draft video

The agent supplies a scene plan; the host app renders a silent vertical video. Use four scenes lasting 6, 8, 8 and 8 seconds, each with the synthetic label. On-screen text is not speech captioning.

Scene	Seconds	On screen text	Source IDs
1	6		
2	8		
3	8		
4	8		

Inspect the actual export

- File exists and plays from start to finish
- 1080 × 1920 vertical format; 30 fps; H.264 MP4
- Measured duration is 30 seconds within 0.1 seconds
- Every name, date, time and number matches the source
- Text remains readable in a phone sized preview; no clipping
- Final scene contains the exact CTA

Actual file and measured duration _____

If no video was rendered, mark media checks NOT RUN. Do not approve an unseen export.

Issue found and repair needed

.....

.....

.....

Human editorial review

Review the content before the formal evaluation block. Read the text against the source and watch the current rendered video before approving the video. Approval does not publish anything.

Artifact and version	Evidence checked	Decision
Newsletter		
LinkedIn		
X		
Storyboard		
Rendered video		

Record the human decision

Reviewer or classroom alias _____ Package version _____

Decision: ☐ Approve ☐ Request changes ☐ Hold

What exactly was reviewed? What is still missing?

.....

.....

.....

.....

Specific requested change or reason for approval

.....

.....

.....

Version rule

A changed source, text, storyboard or video needs renewed review of affected artifacts. Approval for version A does not approve version B. The agent cannot create a human approval.

My rule for deciding when to invalidate approval

.....

.....

Calibrate the evaluation

Now evaluate the process systematically. First define expected behavior. Keep exact checks, source evidence, and quality judgement separate.

Check type	Example	Evidence
Exact	X length; file dimensions; approval hash	Counter, metadata or run record
Source support	A claim is entailed by F03	Compare wording and source
Quality rubric	Clear for this audience	Specific wording and anchor

Quality rubric

Score each 0, 1 or 2. 0 = misses the criterion; 1 = partly meets it with a specific issue; 2 = clearly meets it.

Criterion	What a score of 2 looks like
Clarity	The main idea and action are immediately clear in plain language.
Audience fit	Useful, direct language accessible to nontechnical professionals.
Usefulness	Explains the brief and gives the supplied next step.

All applicable hard checks must pass. Then aim for 5/6 or higher with no zero dimension. Good tone does not cancel an unsupported fact.

Calibration exercise

Review the supplied good and bad examples independently. In the bad example, look closely at the engagement and availability claims. Record your own verdict before discussing it.

Example	Hard verdict	Quality score	Evidence
A		/ 6	
B		/ 6	

A disagreement we resolved and why

.....

.....

.....

Test improve and compare

Use assigned core cases 01, 02, 07, 08, 10 and 12 in pairs. Other cases are extensions. A correctly blocked action can pass. Missing evidence is NOT RUN. Keep the test set unchanged for a repair.

First test case

Case ID _____ Version _____ Mode: live / fixture replay / role play

Given this input, the expected behavior is

.....

.....

Observed output or tool decision and evidence reference

.....

.....

Verdict: PASS / FAIL / BLOCKED / NOT RUN / NOT APPLICABLE

Second test case

Case ID _____ Version _____ Mode: live / fixture replay / role play

Given this input, the expected behavior is

.....

.....

Observed output or tool decision and evidence reference

.....

.....

Verdict: PASS / FAIL / BLOCKED / NOT RUN / NOT APPLICABLE

One controlled repair

Failure and evidence _____

.....

.....

One instruction or guard I changed _____

.....

.....

Before _____ After _____ Same case ID _____

Revised content sent back for human review: ☐ Yes ☐ Not yet ☐ Unchanged

Separate voice demo and final package

The ElevenLabs demonstration uses Harbor Bike Repair, a different fictional business. It is not connected to the newsletter or video pipeline. Observe the mode: LIVE, CAPTURED RUN, or WRITTEN ROLE PLAY.

Voice observations

One fact the voice agent answered accurately, and its evidence

.....

.....

One unknown or action boundary it handled or missed

.....

.....

A natural sounding answer that still needs verification

.....

.....

Submission checklist

- Source pack and claim ledger
- Original newsletter, social drafts, storyboard and actual video status
- Human review record tied to the exact versions
- Case outcomes with evidence; original and revised outputs retained
- Reapproval or explicit remaining blockers
- No publishing or external action claimed without evidence

Exit ticket

One source check _____

One tool boundary _____

One change that invalidates approval _____

Next useful test for this workflow

.....

.....
